

Figure 1. Principles for a transition away from fossil gas

Principle 1

Implement solutions that reduce the greatest amount of greenhouse gases quickly in both the near and long term.

Principle 2

Elevate solutions that prioritise benefits for low-income and disadvantaged households.

Principle 3

Integrate the gas and electricity sectors.

Principle 4

Design a coordinated and self-reinforcing policy mix to transform end uses.

Principle 5

Increase transparency and use best available data and information.
